

The Mobile Access

As the evolution of technology has brought the need to hotels for mobile access, Saimon Bros does not provide upgrades only to its customers, but also gives the same opportunity for customers who have electronic locks from other brands.

That's our diversity!

Three ready to go solutions

1 Saimon Bros App

This is a ready to use solution for hotels who need only the basic functions of mobile access, and no need their own app. The hotel has access to web interface from the reception or remotely via App.

- Digital keys with time frame (check in /check out)
- Low battery alerts
- Check that guests have received the invitation
- Guest access notification
- Audit trail
- Just one time guest unlock
- Unlock upon authorization
- Create key chains for entry in multiple rooms ex maid keys, master keys etc.

2 Customer integration

This solution suits for hotels that have their own application and want add mobile access functions in their App. Instructions and SDK are provided for integration to developers.

3 Third- party

This solution suits for hotels that do not have their own App, they are not willing to have but they want more than the basic functions of Mobile Access, like online check in etc. There are developers who have ready to use solutions. Instructions and SDK are provided for integration to developers.

Benefits

4 benefits for the hotel guests

- 1 Skip front desk – no queues
- 2 Security
- 3 Unique user experience
- 4 Contact free (well known as Covid free)

5 benefits for the hotel

- 1 Guest experience
- 2 Cost effective
- 3 Remote management
- 4 Easy Integrations
- 5 Making the brand loyalty stronger

How it works

1 The guest makes a reservation

2 Reception staff creates the digital key through the web interface or by the App

3 Reception staff register the customer details, check in - check out date, and send him the key via sms or mail

4 The guest receives the digital key via sms or mail, follows the instructions, downloads the app on his smartphone and activates the digital key

5 Once he arrives at the hotel he can go directly to his room

6 Once he is in front of the door of his room, he runs the application and push "tap to unlock"

7 Lock unlocked

BLE driver

Mobile access

An evolutionary product!

The BLE driver device is placed inside the electronic locks and works in parallel and independently with the RFID of the lock, so that in case of failure it is not affected.

It can upgrade all types of smart card locks. It can be installed into already existing electronic locks with no affection of the functionality (magnetic, IC, RFID). A variety of versions for different models of electronic locks.

- Bluetooth wireless technology
- Unlock by downloading the app to your smartphone
- No WiFi needed to the lock
- No WiFi needed to the guest's mobile phone to unlock
- Absolutely safe while communication protocol SHA2 is encrypted
- Low battery consumption and battery lifespan for more than 1 year
- Great performance at high/ low temperature +60°/-20°
- Ideal for the outdoor use
- Max distance of 10m for the smartphone device to work normal
- Room detection by the use of GPS signal when guest is trying to find the room quickly
- Open possibility for the lock to connect to BLE keypad in case guest's mobile phone device is missing

Basic version of BLE driver

BLE driver for hotel locks

Accessories

BLE driver for electric locks & automatic doors

BLE key pad with waterproof protection cover

BLE portable time attendance

Evolutionary
